

Dear Hiring Team,

I am excited to apply for the Software Engineer Intern position at CUBRC.

I am currently pursuing a Bachelor of Technology in Computer Science and Engineering (AI & ML) at Acropolis Institute of Technology & Research. Throughout my academic journey, I have developed a strong foundation in software development, programming, machine learning, and problem-solving, while continuously building projects that solve real-world challenges.

My primary technical strengths include Python, C++, data structures, algorithms, machine learning, and full-stack application development. I enjoy understanding how systems work at a fundamental level and translating ideas into reliable software solutions. Beyond coursework, I actively pursue independent learning and hands-on development to deepen my engineering skills.

I have worked on several technical projects, including TrippinnI, an AI-powered healthcare data quality platform focused on improving EMR and EHR data quality, and AcroIn, a student networking and discovery platform that enables users to connect based on skills, projects, and interests. Through these projects, I gained experience designing software architectures, working with data pipelines, implementing search and filtering systems, integrating APIs, and developing scalable applications.

In addition to software development, I have been studying machine learning and deep learning from first principles. This has strengthened my understanding of mathematical reasoning, analytical thinking, debugging, and system design. I am particularly interested in building reliable software systems that combine strong engineering practices with intelligent technologies.

What attracts me to CUBRC is the opportunity to contribute to challenging technical problems while learning from experienced engineers and researchers. I am eager to apply my technical skills, curiosity, and strong work ethic in a professional environment where I can continue growing as a software engineer.

Although I am early in my career, I bring enthusiasm, adaptability, persistence, and a genuine passion for learning. I am confident that my technical foundation and willingness to tackle difficult problems would allow me to make meaningful contributions to your team.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my skills, projects, and experiences align with the Software Engineer Intern position.

Sincerely,

Ansh Pal
